Description

A Slack-based chatbot developed using a large language model and company-internal information. The data is retrieved from the company's Confluence, Slack, and Google Drive platforms.

 Confluence

 slack

 Google Drive

Employees can ask the chatbot questions about the company.

Accessibility of information

Chatbot provides employees with immediate access to information they need about the company at any time.

Time and cost savings

Employees don't have to spend time searching for information. This allows them to focus on their core tasks.
